

HLRMS – System Context Diagram

System Boundary and External Interactions

This diagram presents the HLRMS Core Platform as the system of interest and shows its relationships with external actors and systems. Internal components and deployment details are intentionally omitted.

Legend

- Direct Interaction / Request Flow (initiates an action or request)
- - - - - Monitoring / Information Flow (metrics, health, or operational data)

Notes

- This System Context diagram defines the system boundary and its external interactions only.
- Internal components such as RabbitMQ, Workers, PostgreSQL, Redis, and other services are not shown here.
- Technical details including ports, containers, networks, and infrastructure are provided in Container and Deployment diagrams.
- The Financial Transfer Demo is an implemented example domain that uses HLRMS; it does not define the scope of the core platform.
